

# Saving Graph Cutoffs as Annotations

To save graph cutoffs as annotations select the *Graph->Save cutoffs as annotations* item in the graph context menu. The following dialog will appear:

The following parameters are available:

*Maximum cutoff* - maximum cutoff value.

*Minimum cutoff* - minimum cutoff value.

*Around cutoff values* - saves the values around cutoffs values.

*Between cutoff values* - saves the values between cutoffs values.

In the *Save annotation(s) to* group you can set up a file to store annotations. It could be either an existing annotation table object, a new annotation table or auto-annotations table (if it is available).

In the *Annotation parameters* group you can specify the name of the group and the name of the annotation. If the group name is set to <auto> UGENE will use the group name as the name for the group. You can use the '/' characters in this field as a group name separator to create subgroups. If the annotation name is set to *by type* UGENE will use the annotation type from the *Annotation type:* table as the name for the annotation. Also you can add a description in the corresponding text field.

Select the parameters and click on the *Save* button. The corresponding annotations will be saved.
