

Converting Alignment

To convert an alignment from

- DNA to RNA
- RNA to DNA
- Raw to DNA or Amino

use the *Advanced* context menu or use the General tab of Options Panel:

The image shows a sequence alignment viewer with a bar chart at the top and a sequence alignment below. The alignment consists of 14 rows of DNA sequences, with columns color-coded by nucleotide: G (orange), T (green), C (red), A (blue), and T (green). The sequence is: GTC AAT C CAG AGT C 227. To the right is a 'General' options panel with the following settings:

- Reference sequence: Select and add
- Alignment info: Alphabet: Raw, Length: 269, Sequences: 52. Buttons for 'DNA' and 'Amino' are visible.
- Consensus mode: Consensus type: ClustalW, Threshold: 0%.
