

Changing Labels Formatting

To change formatting of a tree labels select the *Labels Formatting* toolbar button or the *Tree settings Options Panel* tab:

A screenshot of a software interface for formatting tree labels. It features a 'Color' section with a grey rectangular color picker. Below that is a 'Font' section with a dropdown menu currently showing 'Helvetica'. The 'Size' section has a text input field with the number '12' and a small vertical spinner to its right. At the bottom, the 'Attributes' section contains three buttons: 'B' for bold, 'I' for italic, and 'U' for underline.

Here you can select color, font, size and attributes (bold, italic, etc.) of the labels.

Note that when *a clade has been selected* the labels formatting settings are applied to the clade only.
