

# Algorithm Element Description

When you describe an algorithm element you must specify the **element\_name** and the element type.

The element name corresponds to the element's *Element Name* in the GUI. The name can contain only english letters, numbers, '\_' (underscore) and '-' (hyphen) characters.

See, for example, the description of an ORF element:

```
myORF {  
    type: orf;  
    # Other parameters  
}
```

To find the type and the parameters available for the required algorithm element refer to [Algorithm Elements](#) chapter.
