UGENE Packages

The following package types are currently available:

- **Online Installer:** if the Internet connection is available on the target computer, it is recommended to use this type of package. The installation wizard allows one to add required components or update them, when a new UGENE version is released.
- **Standard Package:** the package includes UGENE main executables, embedded tools, sample data, etc.
- **Full Package:** the same as in the Standard Package + external tools (including tools for NGS data analysis) – this package is recommended for offline installation.
- **NGS Package:** the same as in the Full Package + ChIP-Seq data analysis additions (RScript, reference data)

Also, different package delivery types are available depending on the operating system.

⊘ Note that the number of package types will be decreased in the next releases.
