

# Workflow Designer: pipelines and repeatable experiments

**Workflow Designer.** UGENE *Workflow Designer* is a central part of [UGENE](#) that allows a molecular biologist to create and run complex computational workflows even if he or she is not familiar with any programming language.

A workflow comprises reproducible, reusable and self-documented research routine, with a simple and unambiguous visual representation suitable for publications. A workflow can be run both locally and remotely, either using graphical interface or launched from the command line. Elements in workflow correspond algorithms integrated into [UGENE](#). Additionally you can create custom workflow elements using integrated scripting language, or by connecting arbitrary external command line utility.

To launch the Workflow Designer select the *Tools Workflow Designer* item in the UGENE main menu. The following window appears:

**Example 4:** You can find pattern in a sequence or in sequences and save it as annotations using the following workflow:

U -\* UGENE

Find Pattern

Workflow

**Find Pattern**

Searches regions in each sequence from [Read Sequence](#) similar to [TTCCGAGGGACACTAGGCTGACTC](#) pattern(s). A substring must [match a pattern exactly](#). Searches in [both strands](#) of a sequence. Outputs the regions found annotated as [misc feature](#).

Sequence

**Read Sequence**

Reads sequence(s) from [murine.gb](#).

Pattern Annotations

**Write Sequence**

Save all sequences from [Read Sequence](#) to [pattern.gb](#).

Property Editor

Element name: Write Sequence

**Write Sequence** : Writes all supplied sequences to file(s) in selected format.

To configure the parameters of the element go to "Parameters" area below. **Parameters**

Parameters

Name	Value
Accumulate objects	True
Document format	genbank
Split sequence	1
Output file	pattern.gb
Existing file	Rename

Input data

Set of annotations	<List of sequences>
Sequence	Sequence
Location	<empty>

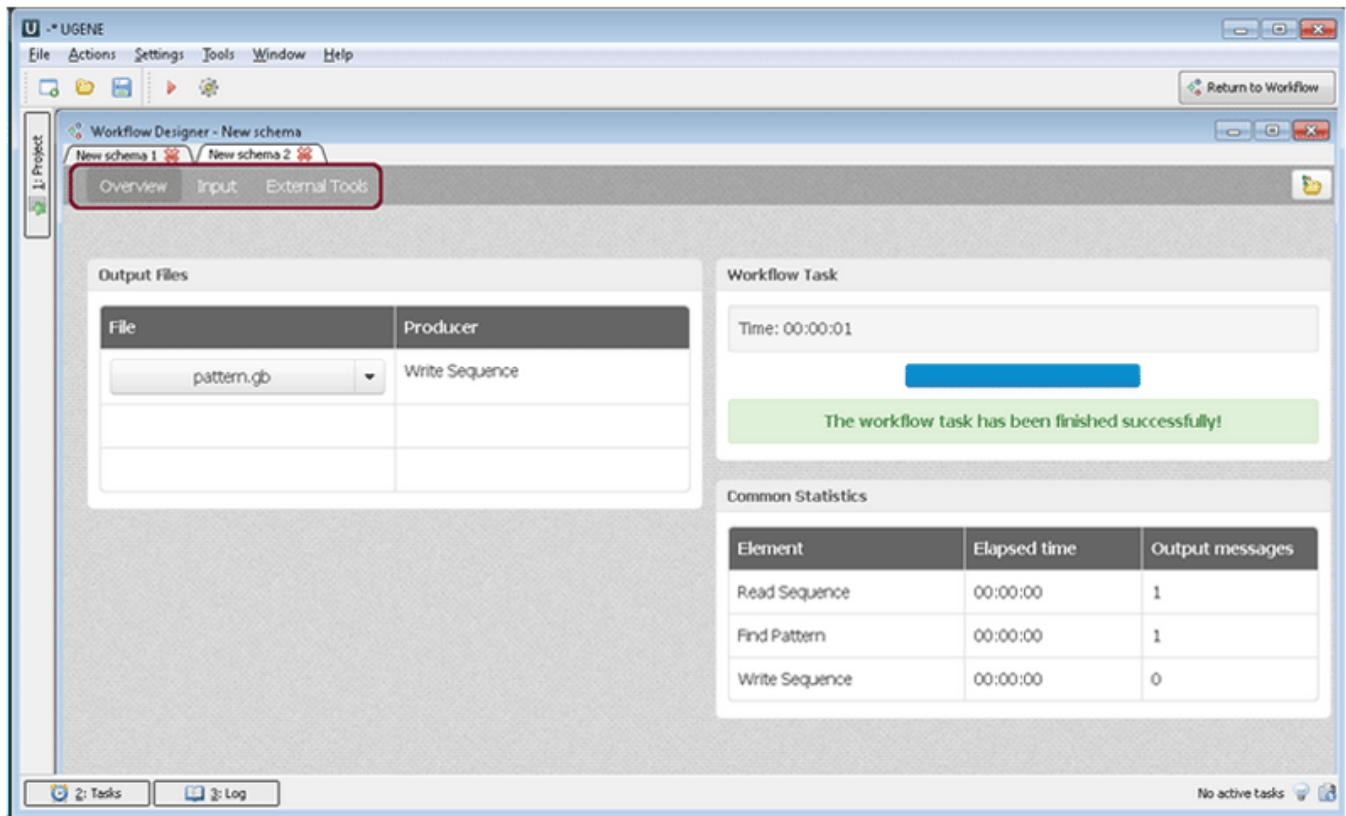

**Document format** : Document format of output file

2: Tasks

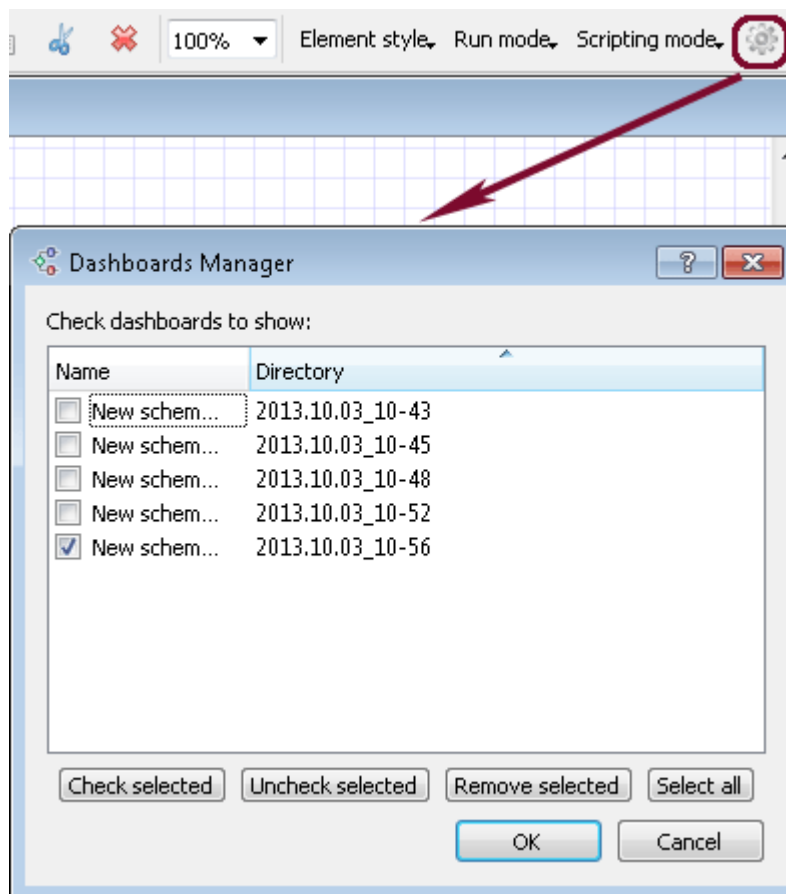

3: Log

No active tasks

Create the workflow, choose parameters and click the *Run* button. If you want to search pattern in many sequences you can add these sequences into *Read Sequence* element. After the end of the running process a report appears. The report include all information about workflow.

All your workflows have been saved and you can navigation between it and use it with a help of the *Dashboards Manager*:

Note that workflows in UGENE are easy to read and share, can be reused multiple times and compiled into a separate standalone command line tools!

For more detailed information about Workflow Designer use the [Workflow Designer Documentation](#).
