

HMM2 Search Element

Searches each input sequence for significantly similar sequence matches to all specified HMM profiles. In case several profiles were supplied, searches with all profiles one by one and output united set of annotations for each sequence

Element type: hmm2-search

Parameters

Parameter	Description	Default value	Parameter in Workflow File	Type
Result annotation	Name of the result annotations.	hmm_signal	result-name	<i>string</i>
Filter by high E-value	E-value filtering can be used to exclude low-probability hits from result.	1e-1	e-val	<i>numeric</i>
Number of seqs	Calculates the E-value scores as if we had seen a sequence database of sequences.	1	seqs-num	<i>numeric</i>
Filter by low score	Score based filtering is an alternative to E-value filtering to exclude low-probability hits from result.	-1000000000.0	score	<i>numeric</i>

Input/Output Ports

The element has 2 *input port*. The first gets the input sequence:

Name in GUI: *Input sequence*

Name in Workflow File: in-sequence

Slots:

Slot In GUI	Slot in Workflow File	Type
Sequence	sequence	<i>sequence</i>

The second input port gets the HMM profile:

Name in GUI: *HMM profile*

Name in Workflow File: in-hmm2

Slots:

Slot In GUI	Slot in Workflow File	Type
HMM profile	hmm2-profile	<i>hmm2-profile</i>

And 1 *output port*:

Name in GUI: *HMM annotations*

Name in Workflow File: out-annotations

Slots:

Slot In GUI	Slot in Workflow File	Type
Set of annotations	annotations	<i>annotation-table</i>
