

Exporting 3D Structure Image

To export a 3D structure image select the *Export Image* item in the 3D Structure Viewer context menu or in the *Display* menu on the toolbar. The *Export Image* dialog will appear:

The image shows a software dialog box titled "Export Image". It contains a section labeled "Export to file" which includes a "File name" text field with a browse button ("...") to its right. Below this is a "Format" dropdown menu currently set to "PNG". At the bottom of the section are two spinners: "Width" set to "3052px" and "Height" set to "1268px". At the very bottom of the dialog are three buttons: "Help", "Cancel", and "Export".

Here you can browse for the file name, select the width and height of the image as well as its format: svg, png, ps, jpg, jpeg, tiff, tif, pdf, bmp, or ppm. For jpg, jpeg formats the quality score parameter is available.
