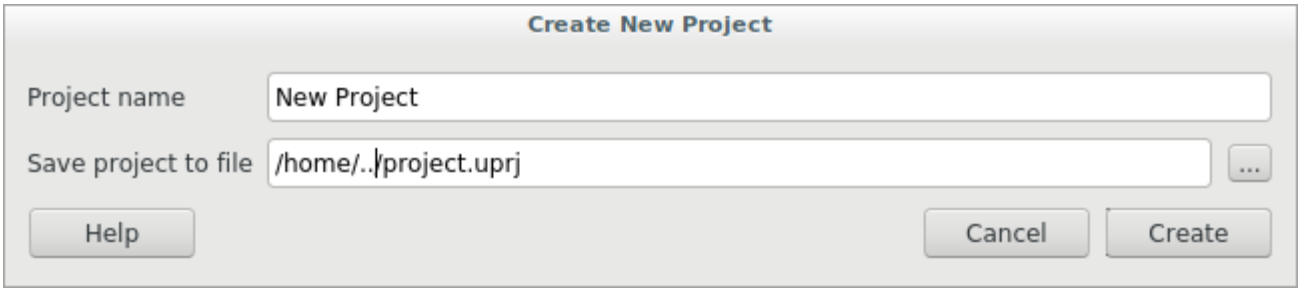
Creating New Project

A *project* stores links to the data files, cross-file data associations, and visualization settings.

Below is a description of how to create a new project manually. Note that if you have no project created when opening a file with a sequence, an alignment or any other biological data, a new anonymous project is created automatically.

To create a new project select the *File New project* menu or click the *New project* button on the main toolbar.

The dialog will appear:



Here you need to specify the visual name for the project and the directory and file to store it.

After you click the *Create* button the *Project View* window is opened.
