Running Schema from the Query Designer

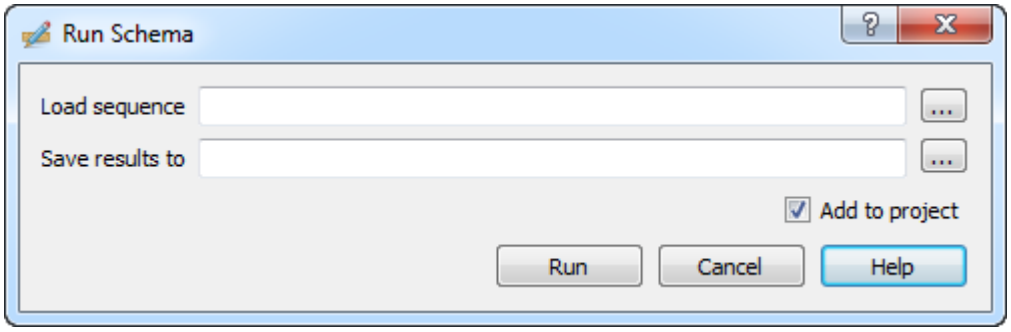
As soon as a *schema* construction is finished:

- all required *algorithm elements are added*
- all required *constraints are set*
- all required *parameters are set*

the schema can be run.

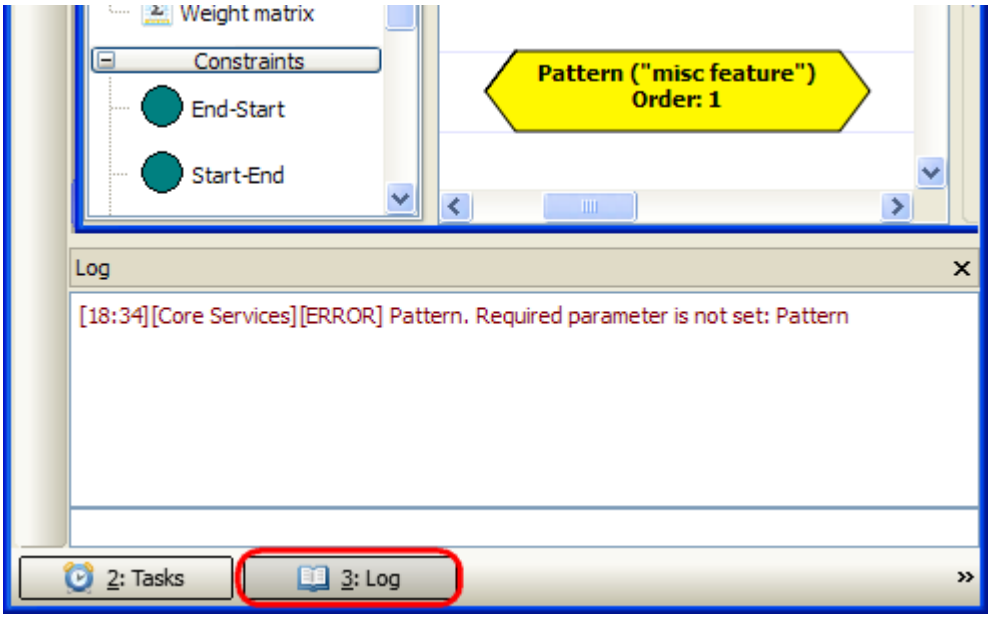
To run the schema select the *Actions Run Schema* item in the main menu or select the *Run Schema* toolbar button.

The *Run Schema* dialog will appear:



Select the *Sequence* to analyze with the schema and browse for the file in GenBank format to *Save results to*. Optionally, check the *Add to project* button to add the created result file to the active project. Press the *Run* button.

In case of an error check the Log View:



Note also that the schema execution task can be canceled from the Task View.
