

IQ-TREE

The *Building Phylogenetic Tree* dialog for the *IQ-TREE* method has the following view:

The dialog box is titled "Build Phylogenetic Tree". It features a dropdown menu for "Tree building method" set to "IQ-TREE". Below this are two tabs: "IQ-TREE options" (selected) and "Display Options". A text area labeled "Command line options for IQ-TREE:" is present, with a "View all options" button to its right. Below the text area are four checkboxes: "Subst. model" (unchecked), "Ultrafast bootstrap" (unchecked), "aIrt" (unchecked), and "Ancestral reconstruction" (unchecked). At the bottom, there is a "Save tree to" field with a browse button "...", "Save Settings" and "Restore Default" buttons, and a "Help" button. On the far right, there are "Cancel" and "Build" buttons.

The full list of available parameters you can find [here](#).

Press the *Build* button to build a tree with the parameters selected.
